Bengaluru

2025-26

Abstract

This project is a simple React-based web application titled "**My Favorite Person**". It is structured using modern frontend development practices. The HTML file (index.html) serves as the entry point and contains a root div that connects with the React application through the main.jsx file. The React setup includes two main components: App and Top, which are rendered inside a `<StrictMode>` wrapper to ensure best practices and highlight potential problems in the application. This setup demonstrates basic component-based development and modular file organization in React, offering a clean and scalable approach for building personal or portfolio-based web applications.
